

GrantAssistant

AI-powered text trimming and citation ranking for NIH SciENcv
with a built-in compliance audit trail.

Free - NIH Compliant - Works inside SciENcv - Audit PDF included

TRUSTED BY RESEARCHERS AT LEADING INSTITUTIONS

Researchers across Southern California's leading biomedical institutions use GrantAssistant to streamline NIH biosketch preparation for R01, R21, and K-award submissions.

Built for researchers preparing NIH grants

SciENcv enforces strict formatting rules. GrantAssistant handles the tedious parts so you can focus on the science.

Character limits are brutal

The Personal Statement allows only 2,500 characters. Cutting your own writing without losing key scientific claims takes hours.

Choosing 4 citations is hard

Each Contribution to Science entry allows up to 4 citations. Picking the most relevant ones from dozens of papers is time-consuming.

NIH requires AI disclosure

NIH NOT-OD-23-149 requires documentation when AI is used. GrantAssistant generates a compliance PDF automatically.

GrantAssistant - grant-assistant-omega.vercel.app - Free and Open Source

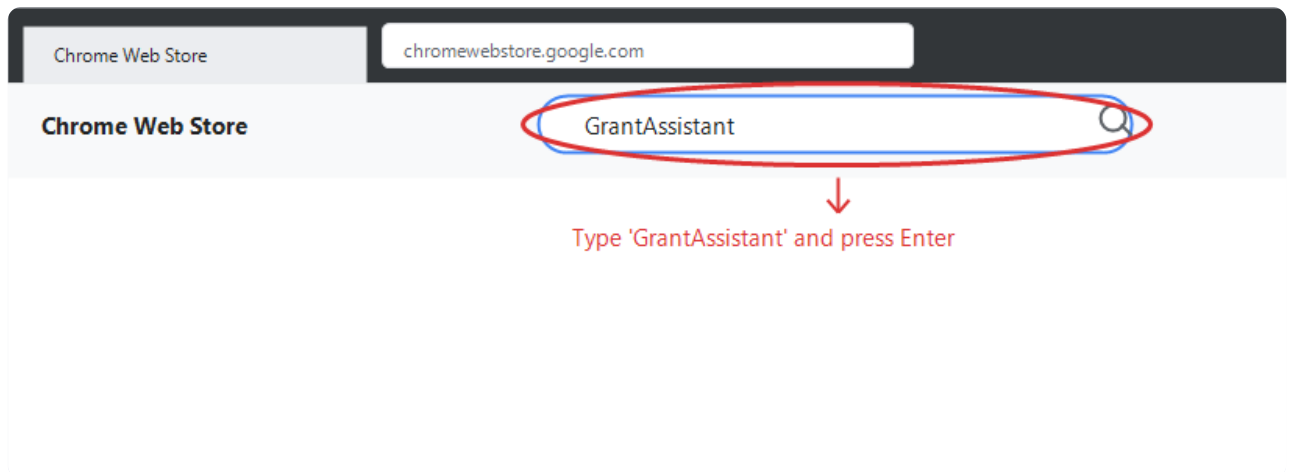

Installing the Chrome Extension

Installs in under two minutes from the Chrome Web Store. No configuration needed before install.

1

Open the Chrome Web Store

Go to chromewebstore.google.com in Chrome. Type "GrantAssistant" in the search box and press Enter.

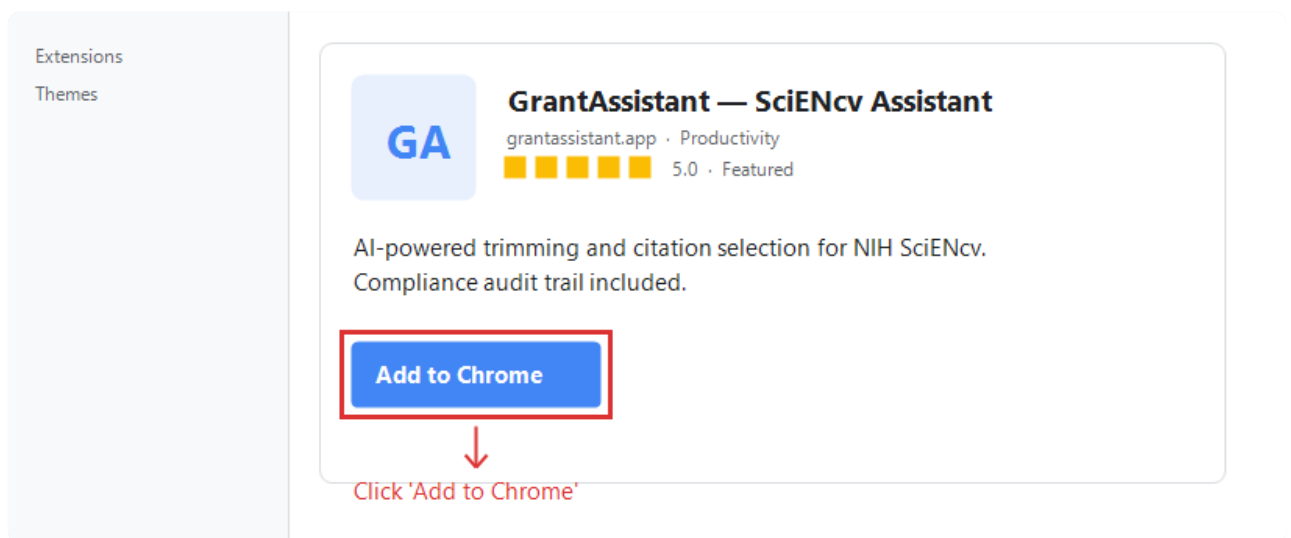

Type "GrantAssistant" in the search bar

2

Click "Add to Chrome"

Select GrantAssistant - SciENCv Assistant from results and click the blue Add to Chrome button.

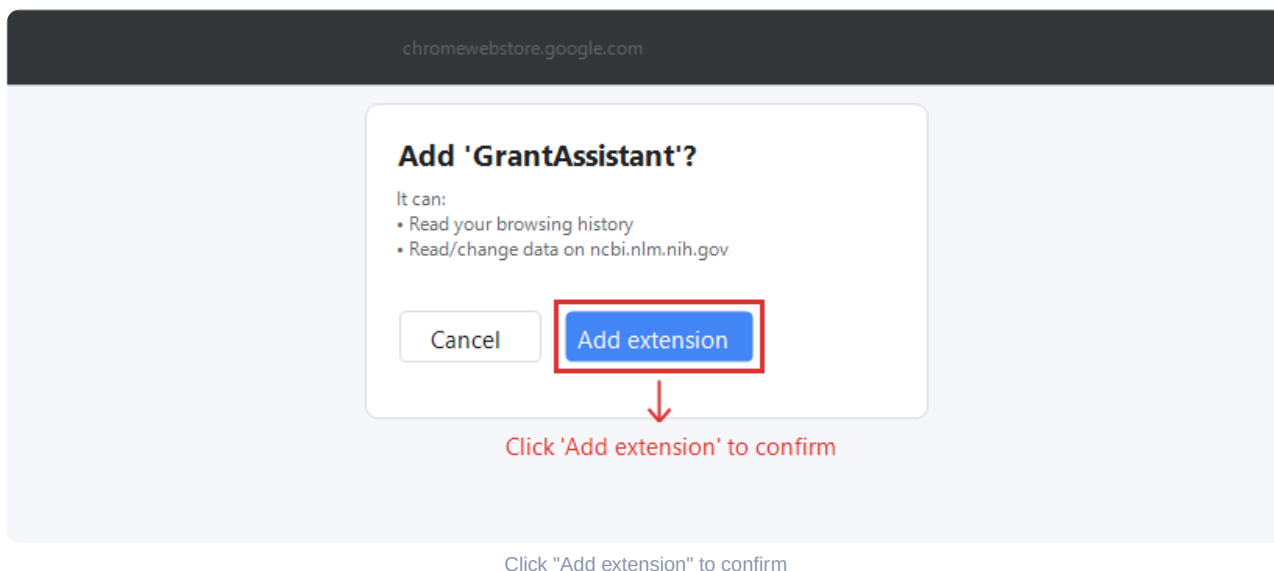

Click "Add to Chrome" on the extension listing

3

Confirm the installation

Click "Add extension" in the permissions dialog. The extension only requests access to ncbi.nlm.nih.gov.

Done! After install, click the GrantAssistant icon in your Chrome toolbar and sign in with Google to activate the AI features. Session lasts 1 hour. Your credentials are never stored in the extension.

Text Trimming

When your Personal Statement or Contribution description exceeds the character limit, GrantAssistant condenses it — removing redundant phrasing while preserving every scientific claim, number, and citation.

Trim - condense to fit the limit

Copy - copy text to clipboard

Revert - undo the trim instantly

1 **Open your biosketch and click "edit" on any section**
Navigate to ncbi.nlm.nih.gov/myncbi and click "edit" next to the Personal Statement or any Contribution to Science description.

2 **The Trim toolbar appears below the text area**

The toolbar appears automatically below any editable text field

3 **Click Trim and review the result**

Success tooltip confirms the reduction — Revert activates so you can undo instantly

- Removes wordy phrases and redundant transitions
- Shortens multi-clause sentences
- Never changes a number, p-value, gene name, drug name, or citation
- Never introduces a new claim or idea

Always review the trimmed text before saving in SciENcv. Use Revert to restore the original instantly if anything looks wrong.

Citation Ranker

Each Contribution to Science entry allows up to four citations. Given your grant title, GrantAssistant ranks your My Bibliography papers and highlights the best four with a plain-English relevance reason for each.

1

Go to Section C - Contribution to Science

The GrantAssistant citation panel appears automatically above each contribution's citation list.

C. Contribution to Science [Done]

You can add up to 5 contributions. Drag and drop tabs to rearrange.

[Add another contribution](#)

Description [edit](#)

[Delete this contribution](#)

Enter grant title to rank citations... [Find Best 4](#)

Citations [[Select citations](#)]

Please include up to four citations that are relevant to this contribution.

☐ Include link to complete list of published work in [My Bibliography](#).
(Selecting this option will make the list public.)

Download: [PDF](#) [Word](#) [XML](#)

The panel appears above each Contribution to Science entry

2

Enter your grant title and click "Find Best 4"

Type the title of the grant you are applying for and click Find Best 4. GrantAssistant returns the four most relevant papers with one-sentence relevance explanations.

C. Contribution to Science [Done]

You can add up to 5 contributions. Drag and drop tabs to rearrange.

Tau phosphorylation and synaptic dysfunction in Alzheimer's disease [Find Best 4](#)

Demo mode — using sample papers. Add real papers via Go to My Bibliography to rank your own publications.

- 1. Tau aggregation and neurodegeneration**
PMID 33641718 — Directly relevant as it focuses on tau pathology, which is central to understanding tau phosphorylation mechanisms in Alzheimer's disease.
- 2. Synaptic plasticity in Alzheimer disease**
PMID 34234567 — Directly addresses synaptic dysfunction in Alzheimer's disease, which is one of the two main focus areas of the grant.
- 3. Phosphorylation cascades in tau pathology**
PMID 29134567 — Specifically examines phosphorylation mechanisms in tau pathology, providing direct methodological overlap with the grant's tau phosphorylation focus.
- 4. Hippocampal memory consolidation mechanisms**
PMID 28234567 — Relevant to understanding synaptic mechanisms and memory dysfunction in Alzheimer's disease, particularly in the hippocampus where tau pathology is prominent.

Citations [[Save citations](#)]

Please include up to four citations that are relevant to this contribution.

My Bibliography [Click here to connect to your ORCID account](#)

Sort by: Publication date Select: None 0 item(s) selected [Add citations](#) [Go to My Bibliography](#) unchecked entries are hidden from display

There are no citations in your My Bibliography.

☐ Include link to complete list of published work in [My Bibliography](#).
(Selecting this option will make the list public.)

Top 4 papers ranked by relevance with reasons for each selection

Select citations manually in SciENcv

Use the ranking as your guide, then check the papers in SciENcv's own citation selector and click Save citations.

No papers in My Bibliography yet? Go to ncbi.nlm.nih.gov/myncbi to add your publications first, or connect your ORCID account directly from the Citations tab.

Compliance Audit Trail

Every Trim and Citation action is automatically logged. Export individual records or your full history as a signed PDF — ready to share with your grants office or attach to your application.

What each PDF certifies

For Trim actions:

"This document certifies that the scientific content, claims, citations, and numerical values were authored by the researcher. AI assistance was limited solely to removing words to meet a formatting character limit imposed by NIH SciENCv. No new scientific ideas, claims, or data were introduced by AI."

For Citation Ranking actions:

"The researcher selected publications from their own record for inclusion in an NIH biosketch. AI was used only to rank relevance based on the grant title provided. All listed publications are original works by the researcher."

NIH NOT-OD-23-149 asks researchers to acknowledge AI use in grant applications. Your GrantAssistant audit PDFs serve as that documentation — generated automatically, no extra work required.
